

# TERRA RAKE

To remove thatch and opening the turf surface. Compacting is broken up and the water can flow off again. Algae and moss are prevented from settling.

The TERRA RAKE is distinguished by its sturdy construction and durability. The TERRA RAKE is attached to the tractor with a category I and 0 three point linkage mounting. The high speed causes the dethatcher teeth to oscillate, which pulls the turf thatch out of the sod and lays it on the surface. The special spring steel teeth are arranged in five rows. This still allows sufficient space for work without blockage despite the narrow distance of 16 mm between the rows.

### TECHNICAL DATA

### TERRA RAKE

Working width in cm:	160	210
Mounting:	rear three point cat. I and 0	
Weight in kg (approx.):	180	195
